SYNCHRONIZE THE TECHNICAL MANAGEMENT OF ECHEMTEST BY NTCs AND ATSs

Dr. Carlo Manuali (carlo.manuali@unipg.it)

Department of Chemistry, Biology and Biotechnology

University of Perugia (IT)

NATIONAL TEST CENTERS

- **Austria (AT) - Vienna University of Technology (*admin: tca.vienna*)**

- **Finland (FI) - University of Helsinki (*admin: tca.helsinki*)**

- **France (FR) - CPE Lyon (*admin: tca.lyon*)**

- **Greece (GR) - Aristotle University of Thessaloniki (*admin: tca.thessaloniki*)**

- **Hungary (HU) - Ëtvös Lörand University of Budapest (*admin: tca.budapest*)**

- **Italy (IT) - University of Perugia (*admin: tca.perugia*)**

- **Netherlands (NL) - University of Amsterdam (*admin: tca.amsterdam*)**

- **Poland (PL) - Jagiellonian University of Technology (*admin: tca.krakow*)**

- **Slovenia (SI) - University of Ljubljana (*admin: tca.ljubljana*)**

- **Spain (ES) - University Complutense of Madrid (*admin: tca.madrid*)**

- **United Kingdom (UK) - University of Reading (*admin: tca.reading*) – <u>NOP</u>**

INTRODUCING ACCOUNTS

- **Total available: 5.000 participants**

- **Allocated for running sessions: 410 accounts for 11 NTC = 4.510 (400 accounts for running production tests by NTC itself or ATSs, 10 for testing and demos) managed by NTC administrators –** *see later for details*

- **Allocated for general administrative purposes: 80 accounts (for administration, official demos, events, emergencies, WGs) called echemtest-1, … , echemtest-55 (group 'echemtest') and managed by central coordination (the remaining 25 are already in use)**

- **Allocated for 'future NTC(s)': 410 (also available for temporary emergences in the meantime) called ectn-1, …, ectn-400 / ectn-demo-1, …, ectn-demo-5 / ectn-test-1, …, ectn-test-5 (group 'ntc-ectn') managed by central coordination**

THE NTC STATE-OF-THE-ART

- **Starting from now, for each NTC actually we have (defined in one group called ntc-<codecountry>) the following accounts (in operation):**

<codecountry>-1, …, <codecountry>-400

<codecountry>-demo-1, …, <codecountry>-demo-5

<codecountry>-test-1, …, <codecountry>-test-5

- **Each NTC administrator is able to modify corresponding accounts (not to create or delete), for example in order to change the name for ATS assignments, and also the group**

THE ITALIAN SCENARIO

- **NTC: University of Perugia - 400 accounts in 1 group called 'ntc-it'**

- **1 NTC administrator called 'ntc.it'** *(instead of 'tca.perugia')*

- **ATS (6): Perugia, Milano, Genova, Bari, Roma, Napoli. In our case we have:**
  - ✓ **Consolidated ATS (3): Perugia, Milano, Genova**
  - ✓ **New ATS (3): Roma, Napoli, Bari**

- 80 accounts for each consolidated ATS (*e.g. Milano, code: mi*): it-mi-1, it-mi-2, … , it-mi-80 in 1 group called 'it-mi'

- 40 accounts for each new ATS *(e.g. Roma, code: rm)*: it-rm-1, it-rm-2, … , it-rm-40 in 1 group called 'it-rm'

- 40 accounts free for 'future ATS(s)': it-new-1, it-new-2, … , it-new-40 in 1 group called 'it-new'

- 5 accounts for demos: it-demo-1, … , it-demo-5 (group 'it-demo', accounts managed by NTC administrator)

- 5 accounts for testing: it-test-1, …, it-test-5 (group 'it-test', accounts managed by NTC administrator)

- 1 ATS reporter for each ATS called ats.<atsname>.<codecountry> (*e.g. 'ats.milano.it' for ''Milano'*)

ACTIONS TO BE COMPLETED

- We need the real name and email of each NTC administrator, in order to move from the present nomenclature tca.<city> to ntc.<codecountry> (*keeping corresponding passwords unchanged*)

- In order to implement ATS(s) you have 2 options:

1. Each NTC administrator re-maps its accounts and groups in order to reflect its internal organization (*following the introduced new nomenclature*)

2. We do the work for you (as soon as possible). In this case we request:
   - ✓ Number of running ATS;
   - ✓ Name, 2-digits code and number of accounts for each ATS;
   - ✓ Number of accounts to keep unassigned for new ATSs (even zero);
   - ✓ Number of demo and test accounts, respectively (10 in total).

- If any, we also need the real name and email of each ATS reporter, in order create the corresponding account that will be called ats.<atsname>.<codecountry>

CONCLUSION

- In addition to past duties, each ATS reporter (or NTC administrator when ATSs are not present) has to:
  a) <u>Before running each session</u>: perform mapping (inside/ outside the system) between 'anonymous' accounts and real users;
  b) <u>After completed sessions</u>: get/save results and produce/save reports (using the system) before running next sessions (for which you will need to use same accounts).

- To conclude, what we expect for each NTC is (*to send to me at* <u>carlo.manuali@unipg.it</u>):
  1. <u>NTC administrator real name and email</u>;
  2. <u>ATS information according to option 2 (if any and if you opted for it)</u>;
  3. <u>ATS reporter real name and email (if any)</u>.
