

## **ANALYTICAL CHEMISTRY (AC3) LIBRARY**

Michał Woźniakiewicz, *Jagiellonian University, Krakow, Poland*

Taking into account the progress of analytical chemistry, changes in curricula and accessibility of particular student's manual it is worth to perform the evaluation of the AC library. The proposed tasks for improvement are:

- ☒ Looking for Collaborators. At present some help is being given by prof. Marjan Weber (Ljubljana University, Ljubljana, SI, initial stage).
- ☒ Going through the library – review of existing questions. Preparation of SOP for reviewing process, common for all libraries.
- ☒ Setting up the system for collection of new questions submitted by AC academic teachers – preferably from Universities actually exploiting the library. It is possible to use the Krzysztof Szczeponik (Jagiellonian University, Krakow, PL) system for collection and reviewing of new questions.
- ☒ Testing of updated AC library with small group of students.
